

Seasonal **impact** with see-through vision

- Monitor customers waiting to enter the store
- Clear vision out to avoid claustrophobia
- Allows vision in to reassure no overcrowding
- Bold graphics that do not block the view
- Use our online visualisation tool for the perfect transparency
- Convey seasonal campaigns
- Communicate key COVID safety messages
- Easy to apply and remove by store staff

This year, with COVID-19 still affecting us all, being able to see how many people are inside stores and how many are waiting to enter is of prime importance. Contra Vision Perforated Window Film allows store staff and people within the store to see clearly outside. This helps with crowd management as well as reducing the claustrophobic effect that can occur with some large scale window graphics. From outside, depending on the perforation pattern, visibility into the store can also be achieved.

It's the time of year when retailers are preparing their stores for that key festive period.

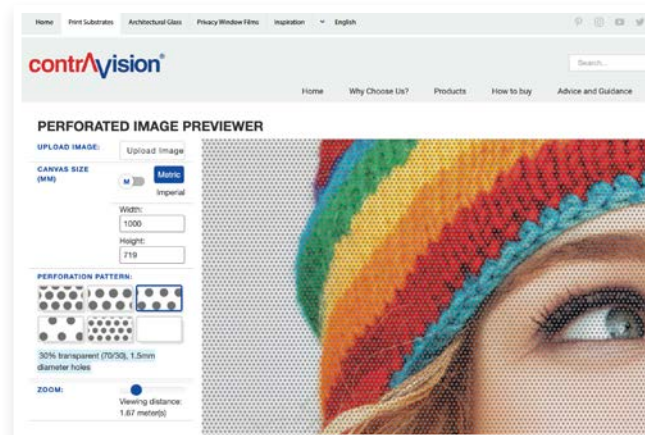

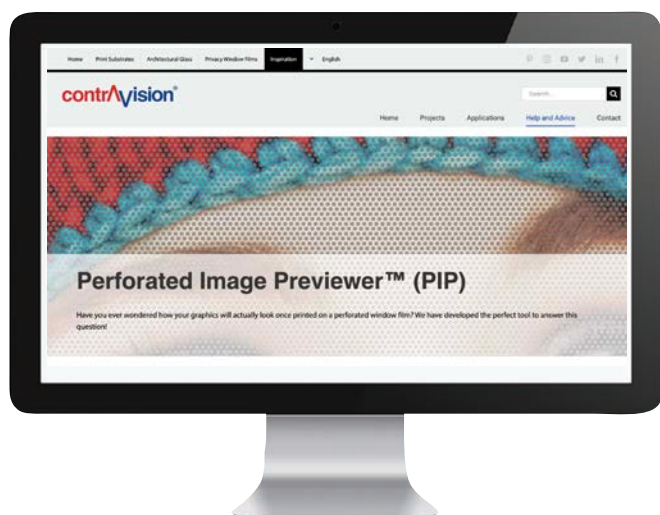

Contra Vision one-way vision graphics helps to communicate the biggest (and smallest) of seasonal messages while still allowing customers and store staff a clear view to outside. Large scale graphics look stunning and can entice crowds with messages clearly read from distance.

Smaller 'posters' are great for short term campaigns and promotions with the added benefit that Contra Vision can easily be applied to windows by store staff, without the need for professional fitters and merchandisers.

Perforated Image Previewer (PIP)

Contra Vision's Perforated Image Previewer (PIP) allows you to upload your graphics and then select different perforation patterns, so you can see how your graphics will appear at different distances, before you print!

You can use this amazing tool by visiting www.contravision.com/print-substrates/image-previewer
