

# An unrivalled range of films for one-way vision applications

Every window and every project is unique, that's why we have a range of films that perfectly suits every application.

## Long Term or Short Term?

Whether you are looking for a product suitable for 6 months or one that lasts over 36 months our expansive product range offers solutions for both.

## Inside or Outside Application?

See-through graphics don't always have to be applied to the outside of a window. Internally applied graphics are ideal for applications where access to the outside is restricted.

## Image Impact or Through-Vision?

A range of films from low transparency (20%) for vibrant image impact and maximum privacy, to high transparency (50%) to maximise through-vision and daylight inside

...and if it's both you're after, then our **Exclusive HD film** is the one for you – another world first from Contra Vision.

Our wide range of transparencies

## Project Lifetime Value

Contra Vision products deliver real value across the entire project lifetime and can save customers up to 25% on overall project costs.

### Create

*Achieve your vision*

The world's widest range of perforated window film, providing unlimited design options suitable for every application.

### Print

*Right first time*

Spectacular results across a wide range of print technologies and Contra Vision® *Grayliner™* ensures colours are right first time.

### Install

*Trouble-Free*

The simplest installation process, suitable for both inside and outside situations in both high and low temperatures.

### On window

*Peace of mind*

Outstanding adhesion technology you can rely on, ensuring great looking results for the entire duration of the project.

### Remove

*Quick and clean*

Excellent removal qualities means minimal tearing, without the adhesive residue you can get from other films.

# Product Guide

Here's the details of our full range of films to help you select the right product.

		TECHNICAL				TRANSPARENCY
